

North Carolina Department of Revenue Local Government Division Property Tax Section

Introduction
Effective 1/1/2017

Following this introduction is the 2017 Cost Index and Depreciation Schedules for use in valuation of business personal property located in North Carolina. One of the most effective and efficient methods for determining current Replacement Cost New Less Depreciation is the use of these valuation tables. These tables are published by the Property Tax Section solely to assist the business personal property appraiser in determining current market value.

All life years used on the different types of property have been carefully researched with federal tax guides, other state government depreciation schedules, as well as information provided to us by the taxpayers themselves. The trend factors are determined using the percentage price increase or decrease over the past year of similar business markets. These percentages come from the latest edition of <u>Producer Price Indexes</u>, as determined by the U.S. Department of Labor, Bureau of Labor Statistics.

In using these trending schedules, you will be utilizing the cost approach to value. In using the cost approach, the appraiser must determine four critical elements:

- 1. The original (historical) installed cost
- 2. The current replacement cost new (RCN)
- 3. The useful economic life of the property
- 4. The loss in value (Depreciation)

When applying the schedules, always use original (historical) cost which includes all costs involved with bringing the property into operation. As an example, consider the following: In their 2017 business listing, a manufacturer of machinery listed \$10,000 in machinery and equipment, acquired in 2010. This amount correctly included \$8,000 actual equipment, \$1,500 installation, and \$500 freight and taxes. Using schedule A, with a suggested useful life of 10 years, we note that the appraised market value as of January 1, 2017 would be:

$$10,000 \text{ x} .33 = 3,300$$

In examining what we have done, the trending factor of 1.11 brings the value of the equipment up to current replacement cost new, which would be:

$$10,000 \times 1.11 = 11,100$$

Then we depreciate RCN assuming the property is seven years old with a suggested ten-year life and therefore has three years remaining in its useful economic life:

\$11,100 x .30 = \$3,330, rounded to the nearest 100 is the same answer as above.

The valuation tables show percent good factors (.33) which are simply the products of the trending factors (1.11) and the straight-line depreciation factors (.30). These percent good factors are used to find current replacement cost new less depreciation. It is **very important** to remember that in using the trending schedules, you do not apply the trend factor a second time as it has already been used in the calculation of the percent good factor.

<u>Note:</u> Certain types of copying and duplicating equipment have replaced computer printers, which are appraised using the "Data Processing Equipment" schedule, below. These types of copying and duplicating equipment are sometimes called "Multi-Function devices", have the ability to function as network computer printer, copier, and fax and may be appraised using the Data Processing Schedule rather than the N5 or L5.

### 

Cotton gin machinery for removing seeds from raw cotton. Cotton Compresses are machines used to bale cotton after ginning.

### <u>DATA PROCESSING EQUIPMENT</u> - Non-production computers

This category includes personal computers, midrange and mainframe computers, and their peripherals, used for data processing. Includes standard IBM-compatible PC's used in manufacturing and point-of-sale systems, but not proprietary point-of-sale units such as computers built specifically to be used as point-of sale computers or other proprietary computerized systems. For POS proprietary systems and electronic cash registers, see "Store Equipment". This category does <u>not</u> include computers embedded in machinery nor does it include equipment or computers specifically designed for use in any other application directly related to manufacturing or retail such as proprietary point-of-sale units. Does not include equipment that is an integral part of other capital equipment that is included in other classes of economic activity, i.e., computers used primarily for process or production
